Abstracts

According to our (Global Info Research) latest study, the global Flicker Noise Measurement System market size was valued at US\$ 49.1 million in 2024 and is forecast to a readjusted size of USD 61.5 million by 2031 with a CAGR of 3.3% during review period.

1/f noise, or flicker noise, is the dominant noise for deep sub-micron CMOS, BJT, FET and HBT devices. It can significantly impact the performance of analog/RF circuits. As an example, 1/f noise becomes phase noise in an oscillator and causes stable issues. A noisy LO signals can severely degrade a receiver's dynamic range and selectivity. Accurate measurement and modeling of 1/f noise are critical to analog/RF circuit designs. However, this measurement is particular difficult, since the measurement system itself can easily introduce other noise sources. Therefore, an integrated measurement system with high stability and low system noise is absolutely critical for accurate 1/f noise measurement

Global Flicker Noise Measurement System key players include Keysight, ProPlus Design Solutions, AdMOS, Platform Design Automation, etc. Global top four manufacturers hold a share about 95%. North America is the largest market, with a share about 90%, followed by Asia-Pacific and Europe, total with a share about 10 percent. In terms of product, 200V is the largest segment, with a share about 50%. And in terms of application, the largest application is Semiconductor Enterprise, followed by Research Institute, etc.
