The global Flight Communication System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Flight communication systems refer to communication equipment and systems on aircraft, helicopters and other aircraft used to communicate with ground control centers, other aircraft and ground equipment. The flight communication system includes the following aspects:

Radio communication system: Used for voice communication with air traffic control, weather information centers, airlines and other aircraft during flight.

Datalink communication system: used to communicate data with ground control centers and other aircraft during flight, such as transmitting meteorological information, aircraft position and trajectory.

Satellite communication systems: used to communicate in areas where there is no terrestrial communications infrastructure, such as on the ocean and in the polar regions.

Emergency communication system: includes emergency broadcast and emergency call system for communicating with ground control centers and other aircraft in the event of an emergency in flight.

The main function of the flight communication system is to ensure that the aircraft can communicate with the ground control center, other aircraft and ground equipment during the flight to ensure the safety and smooth flight. In the modern aviation industry, flight communication systems have become a very important technical field. With the
