Abstracts

The global Flight License Training market size is expected to reach \$ 27997 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032). Flight license training is a systematic training and assessment service provided to students to obtain different levels of pilot licenses (such as PPL private pilot, CPL commercial pilot, and ATPL airline transport pilot). It covers the entire process, including theoretical courses, simulator training, actual flight training, medical examinations, and exam management. Systematic training reduces learning errors and operational risks, shortens the certification cycle, improves the airline employment match rate for students, and significantly enhances safety and skill transferability through standardized operating procedures (SOPs) and high-fidelity simulator training, thus filling the pilot supply gap in the industry. The upstream market for flight license training includes investment in training fleets, simulators and software, fuel maintenance, and compliance qualifications. The cost per flight hour is approximately US\$120?250, while the investment in an FFS Level D simulator can reach US\$8 million?15 million. The accompanying CBT/LMS platform license costs US\$200?500 per person per year. Downstream demand is driven by the fleet expansion and replacement needs of airlines and training centers, while general aviation operators, government agencies, and private universities also form a diverse customer base.

This report studies the global Flight License Training demand, key companies, and key regions.
