A Flight Simulator Yoke is a type of control device used in flight simulation software to replicate the control of an aircraft's primary flight controls, particularly the ailerons and elevator. The yoke is typically a physical, steering-column-like device that allows users to simulate the pitch (up and down) and roll (left and right) of an aircraft, mimicking the movements of a real airplane's control yoke. It is an essential tool for flight enthusiasts, pilots in training, and anyone interested in realistic flight simulation, providing more accurate feedback and immersion compared to a joystick or mouse control. The yoke often includes buttons, switches, and throttle controls to further simulate the real-world experience of flying an aircraft.
