Additionally, the increasing use of energy-efficient glass in commercial buildings for reducing energy consumption and improving indoor comfort is also expected to drive the demand for float glass.

Float glass is a type of glass that is commonly used in commercial building applications. It is made by floating molten glass on a bed of molten tin, which allows it to cool and solidify into a perfectly flat surface. This process creates a high-quality glass that is clear, distortion-free, and highly durable. In commercial building applications, float glass is typically used for windows, doors, and other glass surfaces. It provides a clear and unobstructed view, allowing natural light to enter the building and creating a pleasant working environment for occupants. Float glass is also highly durable, which makes it resistant to impact and weather-related damage.
