Float Glass Cutters are specialized tools or cutting devices used to score and cut float glass sheets during glass processing and fabrication. These cutters typically utilize hardened steel or diamond-tipped cutting wheels to create precise score lines on the glass surface, allowing the glass to be cleanly separated along the intended line. Float glass cutters are widely used in glass manufacturing plants, architectural glass processing, window and mirror fabrication, and automotive glass industries. Depending on the production scale, they may range from handheld manual cutters to automated cutting systems integrated into glass processing lines. Their design focuses on achieving accurate cutting, minimizing edge defects, and improving processing efficiency when handling large and uniform float glass panels.

The annual production capacity of a single Float Glass Cutters typically ranges from 50 to 80 units, with a gross profit margin of around 25%.

Downstream consumption of Float Glass Cutters is 41% in construction, 28% in transportation, 9.5% in electronics, 16% in photovoltaics, and 5.5% in other industries.
