According to our (Global Info Research) latest study, the global Floating Covers market size was valued at USD 980.6 million in 2023 and is forecast to a readjusted size of USD 1395.3 million by 2030 with a CAGR of 5.2% during review period.

Floating covers are geo-synthetic covers that are placed over ground ponds to prevent pollution of the liquid being stored from outside sources, such as animal waste, which can reduce the portability of water, evaporate the liquid being trapped, and remove offensive odours that can reduce the release of volatile organic compounds.

Mulches are increasingly used to protect water from evaporation, algae, odors and other external pollutants due to their increased strength, affordability, light weight, excellent UV resistance and other desirable qualities. The demand for this product is constantly increasing. Key features of floating coverings include good thermal insulation, simple, adaptable design, low maintenance needs, simple installation, odor control, easy conversion to a biogas collector system, resistance to wind lift, puncture and tear resistance, UV resistance, protection against pollution and algae growth, and evaporation control. Moreover, rapid urbanization and rising demand for technologically advanced products such as reinforced PVC floating covers will further drive the growth of the floating covers market. Expansion of various end-use industries will drive market value growth.
