According to our (Global Info Research) latest study, the global Floating Offshore Wind Anchor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Floating Offshore Wind Anchor is a mooring system used to secure floating wind turbines to the seabed, ensuring stability and proper positioning in offshore wind farms. These anchors can be of various types, including suction anchors, drag anchors, and pile anchors, each designed to handle the unique challenges of deep-water environments and dynamic ocean conditions. Floating offshore wind anchors are crucial for maintaining the structural integrity and operational efficiency of wind turbines, which are subject to strong winds, waves, and currents. Their effective deployment enables the exploitation of wind resources in deeper waters where traditional fixed-bottom turbines are not feasible.
