According to our (Global Info Research) latest study, the global Floating Offshore Wind market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Floating Offshore Wind refers to wind turbines mounted on floating structures that are anchored to the seabed but not fixed directly to it. This technology allows for the placement of wind turbines in deeper waters where traditional fixed-bottom turbines are not feasible, harnessing stronger and more consistent wind resources. Floating offshore wind farms have the potential to significantly expand the capacity and efficiency of renewable energy generation, contributing to energy diversification and the reduction of greenhouse gas emissions. This innovation addresses challenges related to ocean depth, environmental impact, and the logistics of offshore wind energy deployment.
