## Abstracts

According to our (Global Info Research) latest study, the global Floating Offshore Wind Mooring Chains market size was valued at US\$ 186 million in 2024 and is forecast to a readjusted size of USD 275 million by 2031 with a CAGR of 5.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Floating Offshore Wind Mooring Chains are heavy-duty chains used to anchor floating offshore wind turbines to the seabed, ensuring they stay stable in deep waters where traditional fixed foundations aren't feasible. These chains connect the turbine platforms to anchors on the ocean floor, allowing the structures to float while remaining securely positioned even in harsh marine conditions. They must withstand constant forces from wind, waves, and currents, making their design critical for the safety, durability, and efficiency of floating wind farms.
