According to our (Global Info Research) latest study, the global Floating Production System market size was valued at USD 32880 million in 2023 and is forecast to a readjusted size of USD 84570 million by 2030 with a CAGR of 14.5% during review period.

Floating production systems are offshore production facilities that are used for the production of hydrocarbons. The process involved separates oil, water, gas, sand, and so on, and distributes the yields to storage, disposal, or transportation facilities. FPS are an essential component required for offshore oil and gas developments. FPS are used for drilling and exploration activities in offshore oil and gas production at various water depths.

The FPSO market segment accounted for about 62% of the total market share and dominated the market. FPSOs are mainly used by companies to extract crude oil through offshore drilling activities, It has a field storage capability and can be used in locations where there is no accessibility to pipeline infrastructure. Eliminating the requirement for pipeline infrastructure, FPSOs reduce operational costs for transporting crude oil.

The Global Info Research report includes an overview of the development of the Floating Production System industry chain, the market status of Energy Enterprises (FPSO (Floating Production Storage and Offloading), Production Semisubmersible), Government (FPSO (Floating Production Storage and Offloading), Production Semisubmersible), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of
