## Abstracts

According to our (Global Info Research) latest study, the global Floating Roof Skimmer System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Floating roof skimmer system is used in storage tanks, particularly those storing petroleum products or other liquids, to remove floating contaminants or debris from the liquid surface. It typically consists of a floating skimming device attached to the roof of the tank, which moves with the fluid level, and collects any floating substances present on the liquid surface. The system includes a mechanism to transfer the collected contaminants to a separate containment area, preventing them from mixing with the stored liquid and facilitating their removal. Floating roof skimmer systems are commonly used in the oil and gas industry to maintain the quality and purity of stored liquids.
