Floating silt fence is a type of silt fence that is designed to float on the surface of the water in a body of water such as a lake, river, or pond. It is used to trap and remove suspended silt and other particles from the water, which can cause problems such as reduced water quality and visibility. The floating silt fence is typically made of a permeable material such as fabric or plastic, and is anchored to the bottom of the water body using weights or stakes. The trapped silt can be removed by periodically checking and cleaning the fence.
