According to our (Global Info Research) latest study, the global Floating Wind Power Platform market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In terms of regions, Europe is expected to remain the largest market for floating wind power platform during the forecast period. Europe has been at the forefront of floating wind power development. Countries like Norway, Scotland, France, Portugal, and Spain have made significant investments in floating wind projects. Followed by the Asia-Pacific region.

Floating wind power platform is a structure designed to harness wind energy in deep waters where traditional fixed-bottom offshore wind turbines are not feasible. Unlike fixed-bottom turbines that are anchored to the seabed, floating wind turbines are installed on floating structures that allow them to be deployed in deeper waters, where wind resources are stronger and more consistent.
