Abstracts

Floatovoltaics is solar panels mounted on a structure that floats on a body of water, typically a reservoir or a lake. Floating solar systems help landowners benefit from otherwise underused bodies of water, such as coal quarries, mineral extraction pits or reservoirs. As opposed to conventional rooftop solar panels, floating ones perform between 5% to 15% better because of the cooling effect of the water, and are not impacted by shading from other buildings.

According to our (Global Info Research) latest study, the global Floatovoltaics market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
