Abstracts

The global Flocculant market size is expected to reach \$ 13440 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

Flocculation is the process where a chemical agent (flocculant) is used to reduce the turbidity of a liquid by binding suspended particles in the liquid together to form larger particles (flocs) that are heavy enough to settle to the bottom of the liquid. There are mainly three types of flocculants: Inorganic Flocculant, Organic Flocculant, and Composite Flocculant and Microbial Flocculant etc.. Subdivision into the specific product included: AS, PAC, PFS and PAM etc. In addition, most inorganic flocculants are considered as coagulants and flocculants at the same time. For this, there is no significant difference in the use of inorganic flocculants.

Global Flocculant key players include Kemira, Chemtrade Logistics, SNF Group, Solenis, etc. Global top four manufacturers hold a share about 20%.

Asia Pacific is the largest market, with a share over 40%, followed by Europe, and North America, both have a share about 40 percent.

In terms of product, Inorganic Flocculant is the largest segment, with a share nearly 85%. And in terms of application, the largest application is Water Treatment, followed by Paper, Minerals Extraction, Oil and Gas, etc.

This report studies the global Flocculant production, demand, key manufacturers, and key regions.
