## Abstracts

According to our (Global Info Research) latest study, the global Flood Defenses market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Flood defences, flood barriers, or flood defence products are used to prevent or manage the detrimental consequences of flood water. Traditional flood defence and flood protection strategies such as growing vegetation to retain water and creating canals (floodways) have been used throughout history. Flood defences are systems put in place to reduce, or ideally prevent, damage by flood water. Flood barriers are an effective way of controlling flood water and helping prevent it from entering your home or business.

Flood protection is a multifaceted and complex issue. Umbrellas and sandbags fail to provide adequate shelter from torrential downpours and flashy floodwater to safeguard individuals and properties. Forecasts suggest the issue will worsen when the impacts of climate change are further realised.

Flood Defenses is very necessary

Once you provide flood defences for a city, everyone in that city will benefit and be protected. (People will be protected whether or not they have contributed towards the cost). Non-rivalry.
