According to our (Global Info Research) latest study, the global Floor-based Automatic Guided Vehicle market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Floor-based Automatic Guided Vehicle (AGV) is a type of mobile robot specifically designed to navigate and transport materials within a facility using pre-defined pathways embedded in the floor. These pathways are typically marked by magnetic strips, wires, or colored tapes that the AGV's onboard sensors follow to maintain accurate navigation and positioning. Floor-based AGVs are integral to automated material handling systems, offering consistent, efficient, and reliable transport solutions in environments such as warehouses, manufacturing plants, and distribution centers. They are equipped with various sensors and safety mechanisms to detect obstacles and prevent collisions, ensuring safe operation around human workers and other machinery. Floor-based AGVs are powered by rechargeable batteries and are controlled by a central management system that coordinates their movements and tasks. These vehicles enhance operational efficiency by reducing manual labor and minimizing errors, making them crucial components in the drive towards increased automation and productivity in industrial settings.
