## Abstracts

According to our (Global Info Research) latest study, the global Floor Grinding Robot market size was valued at US$ 63.38 million in 2025 and is forecast to a readjusted size of US$ 108 million by 2032 with a CAGR of 7.8% during review period.

In 2025, global sales of Floor Grinding Robots were approximately 2,200 units, with an average selling price of around US$28,000 per unit at the manufacturer level. Major manufacturers typically achieved gross margins of approximately 30%–40%.

A Floor Grinding Robot is a robotic construction machine designed for grinding, leveling, surface roughening, removal of old coatings, and polishing of hardened concrete, cement-based, and other hard flooring surfaces. The equipment typically consists of a self-propelled chassis, single-disc or multi-disc grinding system, motors and drive systems, dust extraction interface, wireless remote-control system, controller, and navigation, positioning, or environmental sensing modules. Diamond grinding tools and other abrasives are used to mechanically process the floor surface, correcting unevenness, removing laitance and existing coatings, adjusting surface roughness, or performing multi-stage grinding and polishing.

Upstream components of Floor Grinding Robots mainly include motors and drives, reduction mechanisms, diamond grinding tools, grinding disc assemblies, batteries or power supply systems, wheeled self-propelled mechanisms, dust extraction and collection systems, wireless remote controllers, LiDAR sensors, vision sensors, inertial navigation units, controllers, and structural components. Downstream applications mainly include industrial plants, underground parking garages, commercial buildings, transportation facilities, warehousing and logistics facilities, and other large-area

hardened floor construction and renovation projects. As the construction and flooring industries place greater emphasis on reducing labor intensity and dust exposure while improving grinding efficiency and consistency, floor grinding equipment is increasingly evolving from conventional manually operated machines toward remote-controlled, autonomous navigation, automatic path-planning, and unmanned continuous-operation systems.
