## Abstracts

According to our (Global Info Research) latest study, the global Floor-standing Air Circulating Fan market size was valued at US\$ 1782 million in 2025 and is forecast to a readjusted size of US\$ 2597 million by 2032 with a CAGR of 5.5% during review period.

In 2025, global production of floor-standing air circulating fans reached 12.46 million units, with an average selling price of US\$139 per unit. Floor-standing air circulating fans are air circulators designed to achieve 'uniform air mixing throughout the room,' using floor-standing or freestanding stands. They utilize a more concentrated jet of air (higher static pressure ducts + air guide grilles/impeller design) to 'deliver and recirculate' hot/cold air from air conditioners, reducing thermal stratification and dead zones, and emphasizing 'spatial circulation efficiency, air distance, and multi-directional oscillation.' The upstream of the industry chain mainly includes motors and drives (BLDC/control boards), impellers and air ducts/volutes/air guides (determining air distance and static pressure), structural components and molds (mainly injection molding), sensors and human-machine interaction (remote control/touch control/temperature and humidity), power supplies and wiring harnesses, etc.; the midstream involves manufacturers providing aerodynamic design and NVH (noise, vibration), reliability/safety certification, and integration of appearance and interaction (touch control/remote control/APP); the downstream enters home, office and light commercial scenarios through e-commerce and offline home appliance channels, and cross-border channels. Gross profit margins exhibit a structure of 'lower margins at the manufacturing end, with brand and channel determining the premium,' ranging from approximately 15% to 25%.
