According to our (Global Info Research) latest study, the global Floor Standing Condensing Oil Boiler market size was valued at USD 344.7 million in 2022 and is forecast to a readjusted size of USD 393.6 million by 2029 with a CAGR of 1.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Oil condensing boilers are water heaters fueled by oil. They achieve high efficiency (typically greater than 90% on the higher heating value) by condensing water vapour in the exhaust gases and so recovering its latent heat of vaporisation, which would otherwise have been wasted. This condensed vapour leaves the system in liquid form, via a drain. In many countries, the use of condensing boilers is compulsory or encouraged with financial incentives. A floor-standing boiler is designed to be placed on the floor rather than mounted on a wall.
