## Abstracts

The global Floor Standing Condensing Oil Boiler market size is expected to reach \$ 393.6 million by 2029, rising at a market growth of 1.9% CAGR during the forecast period (2023-2029).

Oil condensing boilers are water heaters fueled by oil. They achieve high efficiency (typically greater than 90% on the higher heating value) by condensing water vapour in the exhaust gases and so recovering its latent heat of vaporisation, which would otherwise have been wasted. This condensed vapour leaves the system in liquid form, via a drain. In many countries, the use of condensing boilers is compulsory or encouraged with financial incentives. A floor-standing boiler is designed to be placed on the floor rather than mounted on a wall.

This report studies the global Floor Standing Condensing Oil Boiler production, demand, key manufacturers, and key regions.
