The global Floor-Standing Shaking Incubator market size is expected to reach \$ 417 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

A floor-standing shaking incubator is a floor-mounted laboratory device that combines temperature-controlled incubation with shaking agitation, mainly used for the cultivation of microorganisms, cells, strains, enzymatic reaction systems, and other biological samples under controlled thermal and continuous shaking conditions. Its core function is to maintain a stable incubation environment while improving mixing, oxygen transfer, and mass transfer through orbital shaking, making it widely used for bacteria, yeast, fungi, suspension cells, and early-stage bioprocess scale-up.

In 2025, the global production of floor-standing shaking incubators was 53,000 units, with an average price of US\$5,800 per unit.
