Flexible graphite yarn is a type of yarn or thread made from expanded graphite, which is a form of graphite that has been processed to have increased flexibility and pliability. It is composed of thin graphite flakes that have been treated with various additives to improve its mechanical properties and make it suitable for weaving into a flexible yarn.

The unique properties of flexible graphite yarn make it well-suited for applications in industries such as petrochemical, automotive, aerospace, power generation, and manufacturing. It is commonly used in high-temperature sealing applications, such as furnace and boiler doors, flange gaskets, valve stems, and other components that require reliable sealing under extreme conditions.
