The global Flour Sieving and Conveying System market size is expected to reach \$ 1345 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Flour sieving and conveying systems are complete sets of equipment that use vibrating screens, rotary screens, and other devices to remove impurities, break up clumps, and homogenize particle size of bulk or bagged flour, and then continuously convey it to downstream processes using screw conveyors, pneumatic conveyors, etc. They are widely used in food processing, warehousing, and packaging.

Upstream industries mainly include wheat planting, grain storage, flour milling raw material supply, and the manufacturing of equipment components such as motors, screens, and stainless steel parts; downstream industries cover flour processing plants, food and baking companies, frozen food plants, central kitchens, and automated flour packaging and logistics applications.

In 2025, the global market price for flour sieving and conveying systems was \$30,370 per set, with annual sales of approximately 31,000 sets, a global annual production capacity of 40,000 sets, and an industry profit margin of 25%.
