Abstracts

The global Flow Cytometers market size is expected to reach \$ 8161 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

Flow cytometers (FC or FCM) are automated instruments that quantitate properties of single cells, one cell at a time. They can measure cell size, cell granularity, the amounts of cell components such as total DNA, newly synthesized DNA, gene expression as the amount messenger RNA for a particular gene, amounts of specific surface receptors, amounts of intracellular proteins, or transient signaling events in living cells. Quantities are usually relative, but can be numbers of molecules per cell when absolute values are needed. Typically, up to three to six properties or components are quantitated in a single sample, cell by cell, for about 10,000 cells, in less than one minute (not counting time to prepare the sample, which might be an hour or more).

US is the largest Flow Cytometers market with about 70% market share. Europe is follower, accounting for about 15% market share.

The key players are BD, Beckman Coulter, Merck KGaA (Emd millipore), Partec GmbH, Thermo Fisher, Luminex Corp, Miltenyi Biotec, Intellicyt Corp, Sony?Icyt?, Apogee Flow Systems, Advanced Analytical, GE Healthcare, Union Biometrica etc. Top 3 companies occupied about 65% market share.
