Abstracts

Flow cytometry is an impedance or laser-based process that is employed in cell sorting, cell counting, biomarker detection, and protein engineering. Flow cytometers allow for the in-depth analysis of cell structures using software solutions. The process starts with a sample that is concentrated into a hydro-dynamically focused stream of fluid. The fluid stream is then passed onto a laser beam from an inbuilt source within the instrument. This laser beam then passes through the sample stream, and disperses light in several directions. This phenomenon is called scattering, and the light is captured using optics and detectors inside the instrument.

Scope of the Report:

This report focuses on the Flow Cytometers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The reagents and consumables segment accounted for the major shares in this market. The increasing requirement of diagnostic processes in healthcare facilities globally has led to a rise in demand for flow cytometer reagents.
