## Abstracts

According to our (Global Info Research) latest study, the global Flow Cytometry in Oncology and Immunology market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global increase in HIV diagnoses is a significant market factor for flow cytometry, and this is because the flow cytometry technique is specifically used for HIV diagnosis. In flow cytometry, light scattering is utilized to identify cells. These cells receive particular markers known as CDs depending on the type of scattering (clusters of differentiation). The main market players are concentrating on creating new products, which is anticipated to propel market growth over the forecast year.

Flow cytometry is a powerful technology that is widely used in both oncology and immunology research. It is a technique used to analyze the physical and chemical properties of cells in a heterogeneous population, by labeling and detecting specific molecules on the surface of cells. The resulting data can provide information about the number, size, and complexity of cells in a sample, as well as their phenotype and function.

In oncology, flow cytometry is often used to analyze cancer cells and to monitor the progression of the disease. For example, flow cytometry can be used to identify and quantify cancer stem cells, which are thought to be responsible for tumor initiation and recurrence. It can also be used to measure the expression of tumor-associated antigens, which are molecules expressed by cancer cells that can be targeted by

immunotherapy.

Overall, flow cytometry is a versatile tool that has many applications in oncology and immunology research. It can provide valuable information about the biology of cells and their interactions with other cells and molecules, and can help researchers to develop new diagnostic and therapeutic approaches for cancer and other diseases
