The global Flow Cytometry Testing Technology Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Flow Cytometry (FCM) is a high-tech technology developed in the 1970s. It is a modern cell analysis technology that can detect multiple parameters of a single particle quickly, accurately and objectively. It integrates computer technology, laser technology, fluid mechanics, cytochemistry, and cellular immunology, and has the function of analyzing and sorting cells. It can not only measure the characteristics of cell size and internal particles, but also detect cell surface and cytoplasmic antigens, intracellular DNA, RNA content, etc. It is widely used in hematology, immunology, oncology, pharmacology, molecular biology, and other disciplines.

Flow cytometry testing technology services is a technology that measures the biological, physical and chemical characteristics of individual cells or organelles in a liquid system, and quantitatively analyzes and sorts the required cells or organelles according to these characteristics. It is a technology that can detect various characteristics of cells or biological particles, used to understand the mean and distribution of cell populations, and can also sort cells of interest for further culture research on the cells.
