Abstracts

According to our (Global Info Research) latest study, the global Flow Cytometry Tubes market size was valued at US\$ 315 million in 2024 and is forecast to a readjusted size of USD 416 million by 2031 with a CAGR of 4.0% during review period.

Flow cytometry tubes are containers used in flow cytometry experiments, typically for flow cytometry detection and sorting operations. The design feature of flow cytometry tubes is that the tube body is circular, the tube wall is uniform, and the transparency is high. This design helps ensure that cells are not disturbed during the flow process, thereby ensuring the accuracy of experimental results.

Flow cytometry tubes are one of the commonly used consumables in flow cytometry experiments, with a certain market size and continuous growth. The driving factors mainly include the continued use of flow cytometry in scientific research and clinical diagnosis, especially in areas such as immunophenotyping, reticulocyte counting, and drug resistance testing. In addition, flow cytometry has been used in virus related research activities and clinical trials, and the prevalence of COVID-19, influenza virus, etc. has further promoted the growth of the market. The main manufacturers in the flow cytometer tubes market include Pluriselect Mtcbiotech, Sysmex, BD, Corning, Beyotime, Sangon Biotech, Labgic and other companies. North America dominates the consumer market, followed by Europe. The application areas of flow cytometry are constantly expanding, so the market size of flow cytometry tubes will continue to grow in the future.
