Abstracts

The global Flow Sensor and Flow Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Flow sensors are used to measure the flow velocity or volumetric flow rate of fluids through pipes or channels. It usually obtains the flow information of the fluid through direct contact or non-contact, and converts it into an electrical signal output. Flow sensors usually have the characteristics of high precision, multiple working principles, convenient installation and high reliability. The flow module is a modular device that integrates flow sensors and related circuits to measure and process flow information of fluids. It includes data processing functions, built-in calibration and self-test functions, and is used in industrial automation, flow monitoring and control, energy management and other fields to achieve accurate measurement and control of fluid flow.

Flow sensors and flow modules are devices used to measure and monitor the flow of liquids, gases or other media.
