The global Flow Splitter For Oxygen Concentrator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The flow splitter typically consists of an inlet connection that connects to the oxygen concentrator's output port and multiple outlet connections where oxygen tubing or devices can be attached. It incorporates valves, regulators, or other flow control mechanisms to ensure an equal or adjustable flow of oxygen to each outlet. The flow splitter enables the simultaneous use of oxygen by multiple individuals or devices, such as oxygen therapy masks, nasal cannulas, nebulizers, or other medical equipment. It allows for flexibility in oxygen delivery, accommodating the needs of multiple users without the need for separate oxygen concentrators.

A flow splitter for an oxygen concentrator is a device used to divide or split the flow of oxygen generated by an oxygen concentrator into multiple outlets or delivery points. It is designed to provide a controlled and regulated flow of oxygen to multiple users or devices simultaneously.
