Abstracts

Floriculture is a branch of horticulture concerned with cultivating ornamental and flowering plants for floristry and gardens, comprising the floral industry. The growth of new varieties by plant breeding is a main occupation of floriculturists. Floriculture lighting activates several types of photoreceptors in plants to promote photomorphogenesis, photoperiodis, photosynthesis and phototropism in plants. All plants-including those that produce flowers need carbon dioxide, light, water and nutrients for growth and survival. Plants require light to catalyze the chemical reaction between water and carbon dioxide, creating the carbohydrates necessary for growth.
