## Abstracts

According to our (Global Info Research) latest study, the global Flu Vaccine market size was valued at USD 5664.4 million in 2023 and is forecast to a readjusted size of USD 7756.9 million by 2030 with a CAGR of 4.6% during review period.

Influenza vaccines, also known as flu shots, are vaccines that protect against influenza. A new version of the vaccine is developed twice a year as the influenza virus rapidly changes. Most provide modest to high protection against influenza; however, each year this varies. Evidence in adults over 65 years old is poor. They decrease the number of missed days of work by a half day on average. Vaccinating children may protect those around them.

Global Flu Vaccine key players include Sanofi Pasteur, CSL, GSK, etc. Global top three manufacturers hold a share over 75%.

North America is the largest market, with a share about 40%, followed by Europe, and Asia-Pacific, both have a share about 45 percent.

In terms of product, Quadrivalent Influenza Vaccine is the largest segment, with a share nearly 85%. And in terms of application, the largest application is For Adults and Children over 3 years, followed by For Children (6 months to 3 years).

The Global Info Research report includes an overview of the development of the Flu Vaccine industry chain, the market status of For Children (6 months to 3 years) (Trivalent Influenza Vaccine, Quadrivalent Influenza Vaccine), For Adults and Children over 3 years (Trivalent Influenza Vaccine, Quadrivalent Influenza Vaccine), and key enterprises in developed and developing market, and analysed the cutting-edge
