According to our (Global Info Research) latest study, the global Flue Gas Desulfurization Service market size was valued at US\$ 7146 million in 2025 and is forecast to a readjusted size of US\$ 11661 million by 2032 with a CAGR of 8.0% during review period.

A Flue Gas Desulfurization Service is an environmental treatment technology and engineering service used in industrial boilers, power plants, chemical plants, and other combustion systems. Its primary function is to remove sulfur dioxide (SO₂) from flue gas using wet, dry, or semi-dry FGD technologies, reducing pollutant emissions to comply with environmental standards and regulations. The solution typically includes system design, equipment supply, installation, and long-term operation and maintenance, and is widely applied in coal-fired power plants, steel plants, cement plants, waste incineration, and chemical industries.

The future development of Flue Gas Desulfurization Services will trend toward high efficiency, low energy consumption, intelligent operation, modular design, and integrated solutions. Next-generation technologies will integrate automation, real-time monitoring, data analytics, and remote management to enable continuous operation and optimized emissions. With increasingly strict environmental regulations and industrial green transformation, higher demands are placed on desulfurization efficiency, operational stability, and system reliability, while promoting combined use of wet, dry, and hybrid FGD technologies to enhance overall system economy and environmental performance.
