## Abstracts

The global Flue Gas Waste Heat Recovery market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

From the perspective of energy utilization and environmental protection, flue gas waste heat recovery has huge potential. In modern industrial production, the flue gas generated by boilers and other equipment contains a large amount of waste heat. If this waste heat can be effectively recovered, it can not only improve energy utilization efficiency, but also reduce energy waste and reduce environmental pollution. Therefore, flue gas waste heat recovery technology is in line with the current development trend of green, low-carbon and environmental protection. With the advancement of technology, the efficiency and reliability of flue gas waste heat recovery equipment will continue to improve. For example, more efficient heat exchange technology and more advanced waste heat utilization technology will help improve the economic and environmental benefits of flue gas waste heat recovery. At the same time, the application of new materials and new technologies will also bring new opportunities for the development of flue gas waste heat recovery technology.
