According to our (Global Info Research) latest study, the global Fluid Bed Coating market size was valued at US\$ 1636 million in 2024 and is forecast to a readjusted size of USD 2516 million by 2031 with a CAGR of 6.3% during review period.

Fluid Bed Coating is a coating process in which solid particles (such as powders, granules, or tablets) are suspended in a stream of air or gas, creating a 'fluidized' bed. The suspended particles are then coated with a layer of material, typically a liquid coating material, which solidifies upon drying, creating a uniform coating on the surface of the particles. This technique is widely used in the pharmaceutical, food, and chemical industries for various applications, including drug coating, particle encapsulation, and controlled release formulations.
