A Fluid Dynamic Bearing (FDB) for Cooling Fans is an advanced bearing technology designed to enhance the performance and longevity of cooling fans. Unlike traditional bearings, FDBs use a thin layer of lubricating fluid to create a dynamic pressure that supports the rotating shaft, reducing friction and wear. This results in quieter operation, higher rotational stability, and a longer lifespan for the cooling fan. Fluid dynamic bearings are particularly beneficial in high-performance and high-reliability applications, such as computer systems, electronic devices, and industrial equipment, where efficient heat dissipation and noise reduction are crucial.
