Abstracts

According to our (Global Info Research) latest study, the global Fluid Heating & Cooling Coils market size was valued at US\$ 1145 million in 2025 and is forecast to a readjusted size of US\$ 1978 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global output of fluid heating and cooling coils reaches 2,650,000 units, with an average selling price of 420 USD per unit, total capacity of 3,100,000 units, and a gross margin of 29%.

Fluid heating and cooling coils are heat-exchange components designed to transfer thermal energy between fluids and air or other media. They are typically made from copper, stainless steel, or aluminum tubes formed into coil structures, sometimes combined with fins to enhance heat transfer. These coils are widely used in HVAC systems, industrial process control, energy equipment, and heating and cooling systems to regulate the temperature of liquids or gases.

Upstream mainly includes copper, aluminum, and stainless steel tubing, fin materials, welding and forming equipment, and anti-corrosion and surface treatment materials. The midstream consists of manufacturers responsible for the design and production of heating and cooling coils, with core competencies in heat-transfer efficiency, structural reliability, and customization. Downstream applications cover commercial and industrial HVAC systems, data centers, energy and chemical installations, and food and pharmaceutical process equipment, with procurement typically conducted through equipment OEM partnerships or engineering project tenders.
