According to our (Global Info Research) latest study, the global Fluid Management Devices market size was valued at USD 11040 million in 2023 and is forecast to a readjusted size of USD 14470 million by 2030 with a CAGR of 3.9% during review period.

A fluid management device is primarily used to balance body fluid to prevent complications associated with the improper flow of fluids, undesired fluid levels, fluids with different temperature, and improper disposal of fluids. It is designed to manage the patient's fluid levels internally and externally through a safe, effective, and accurate process. The fluid level varies due to dialysis, surgical fluid, body fluid management, contrast media, and waste fluid management used in diagnostic and interventional procedures. The system is equipped with different equipment and consumables or is a standalone device such as dialysis machines and pumps, which are used to manage body fluids.

The hospitals dominated the end-user segment of the fluid management devices market. The significant rise of fluid waste in the multi-speciality hospitals or hospital groups that work under government sponsorship or through private entities will drive the growth of this market segment.
