## Abstracts

A fluid management device is primarily used to balance body fluid to prevent complications associated with the improper flow of fluids, undesired fluid levels, fluids with different temperature, and improper disposal of fluids. It is designed to manage the patient's fluid levels internally and externally through a safe, effective, and accurate process. The fluid level varies due to dialysis, surgical fluid, body fluid management, contrast media, and waste fluid management used in diagnostic and interventional procedures. The system is equipped with different equipment and consumables or is a standalone device such as dialysis machines and pumps, which are used to manage body fluids.

### Scope of the Report:

This report focuses on the Fluid Management Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The hospitals dominated the end-user segment of the fluid management devices market. The significant rise of fluid waste in the multi-speciality hospitals or hospital groups that work under government sponsorship or through private entities will drive the growth of this market segment.

In terms of geography, the Americas led the global fluid management devices market and is anticipated to continue the dominion during the forecast period. Factors such as the rising occurrence of chronic disorders like cardiac, obesity, urology, neurology, and arthroscopy and growing need for various types of fluid management devices in hospitals and ASCs drives the growth of the market in this region.

The worldwide market for Fluid Management Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
