According to our (Global Info Research) latest study, the global Fluid Permanent Magnetic Separator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Fluid permanent magnetic iron remover is a device that uses a strong magnetic field to filter and separate iron impurities or other magnetic substances in fluids. When the fluid containing magnetic impurities passes through the iron remover, these magnetic particles are attracted by the strong magnetic field and captured on the surface of the magnetic rod or magnetic plate, thereby separating from the fluid. Fluid permanent magnetic iron remover can efficiently remove ferromagnetic impurities in fluids, improve the purity and quality of products, and protect downstream equipment from wear and damage.
