A fluidized bed sand cooler is a type of industrial equipment used to cool sand or other granular materials in a continuous process. The cooler works by passing a stream of air through a bed of sand, causing the particles to become fluidized and allowing for efficient heat transfer and cooling. This process helps to reduce the temperature of the sand quickly and evenly, making it suitable for use in various industrial applications such as foundries, casting, and molding processes. Fluidized bed sand coolers are commonly used in the metal casting industry to cool sand molds and cores after they have been formed.
