According to our (Global Info Research) latest study, the global Fluidized Bed Concentrator (FBC) market size was valued at USD 17 million in 2023 and is forecast to a readjusted size of USD 24 million by 2030 with a CAGR of 4.8% during review period.

A fluidized bed concentrator (FBC) is an industrial process for the treatment of exhaust air. The system uses a bed of activated carbon beads to adsorb volatile organic compounds (VOCs) from the exhaust gas. Evolving from the previous fixed-bed and carbon rotor concentrators, the FBC system forces the VOC-laden air through several perforated steel trays, increasing the velocity of the air and allowing the sub-millimeter carbon beads to fluidize, or behave as if suspended in a liquid. This increases the surface area of the carbon-gas interaction, making it more effective at capturing VOCs.

North America is the largest Fluidized Bed Concentrator (FBC) market with about 61% market share. Japan is follower, accounting for about 29% market share.
