Fluidizing media refers to materials used to create a fluidized bed or to assist in fluidizing a solid material (usually powders or granular substances) in a gas or liquid medium. The goal of fluidization is to suspend solid particles in a fluid flow, creating a system where the particles behave like a fluid. This allows for better mixing, heat transfer, mass transfer, and reaction rates in industrial processes. Fluidizing media are essential components in systems like fluidized bed reactors, drying systems, and separators.
