Abstracts

According to our (Global Info Research) latest study, the global Fluoride Toothpaste for Orthodontics market size was valued at US\$ 289 million in 2025 and is forecast to a readjusted size of US\$ 384 million by 2032 with a CAGR of 4.2% during review period.

In 2024, global Fluoride Toothpaste for Orthodontics production reached approximately 38.44 million units, with an average global market price of around US\$ 7 per unit. Fluoride toothpaste for orthodontics is an oral care product specifically designed for individuals undergoing orthodontic treatment (such as wearing fixed brackets or invisible aligners). Building on the basic fluoride anti-caries function, it features a special formula tailored for cleaning around orthodontic appliances. By adding fluoride agents (e.g., sodium fluoride, sodium monofluorophosphate), it enhances enamel acid resistance to prevent cavities. It also contains mild abrasives and antibacterial ingredients to effectively remove food debris and dental plaque around brackets and appliance gaps, reducing risks of orthodontic white spot lesions and gingival inflammation, while meeting both oral hygiene maintenance and caries prevention needs during orthodontic correction.

The market for fluoride toothpaste for orthodontics is growing as more people, especially teenagers and adults, seek orthodontic treatment for aesthetic reasons, driving interest in specialized oral care products. Traditional orthodontic treatments often lead to caries and gingivitis around brackets, pushing consumers to choose targeted care products. Technologically, such toothpaste is developing towards low - abrasion formulas to protect appliances and enamel, with antibacterial properties to inhibit cariogenic bacteria and fluoride slow - release technology for better caries prevention. Packaging is also becoming more portable and offering multiple flavors to

improve user experience. With the increasing popularity of invisible orthodontics, users of clear aligners have higher requirements for oral cleaning, so the market will focus on differentiated functions like customized formulas for different appliances and emphasize the importance of oral care during orthodontic treatment through education. However, the industry faces competition from regular fluoride toothpaste and challenges in raising consumer awareness about specialized orthodontic care products.
