The global Fluorinated Organic Electret Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Organic fluorine compounds have excellent electronegativity, electron affinity and surface potential stability, which can effectively prolong the charge storage performance. Fluorine-containing organic electret materials are widely used in the field of high-efficiency and low-resistance air filter materials. Electret air filter materials require materials with high charge storage density, long life and high stability. Raw materials used as electrets require excellent dielectric properties, such as high bulk resistance and surface resistance, high dielectric breakdown strength, low moisture absorption and air permeability, etc.
