Abstracts

The backsheet is located on the outer layer of the back of the photovoltaic cell and is an important part of the photovoltaic cell. It not only plays the role of packaging, but also plays a role in ensuring that the photovoltaic cell is not affected by the environment and ensures the service life of the photovoltaic cell. It should have excellent long-term aging resistance, that is, resistance to damp heat, dry heat, ultraviolet radiation, electrical insulation resistance, corrosion resistance, high and low temperature resistance, water vapor barrier and other properties. Fluoropolymers containing C-F groups often have many advantages, such as excellent heat resistance, chemical corrosion resistance, weather resistance, solvent resistance, low flammability, high light transmittance, low friction, low refraction rate, low surface energy, low moisture absorption and super oxidation resistance. Therefore, fluorine-containing backsheets are widely used.
