According to our (Global Info Research) latest study, the global Fluorine-Based Grease for Electronic market size was valued at US\$ 217 million in 2025 and is forecast to a readjusted size of US\$ 344 million by 2032 with a CAGR of 6.5% during review period.

Global sales of fluorine-based grease for the electronics industry reached 679 tons in 2025, with an average price of \$311/kg.

Fluorine-based grease for the electronics industry is a class of high-purity fluorine-based lubricating materials specifically designed for electronic components, semiconductor devices, precision electronic equipment, and consumer electronics. It is made with perfluoropolyether (PFPE) or fluorosilicone oil as the base oil, combined with ultrafine polytetrafluoroethylene (PTFE) or special fluorinated thickeners. These greases feature extremely low ion content (20 kV/mm), wide temperature range (-60? to 250?), non-flammability, and material compatibility. They provide lifetime maintenance-free lubrication in microelectronics manufacturing, precision electronic assembly, and high-end consumer electronics, avoiding the ion contamination, volatilization loss, and material corrosion problems of traditional greases.

The raw material system of fluorinated greases uses perfluoroolefins as the core monomers, mainly including hexafluoropropylene (HFP) and tetrafluoroethylene (TFE), which are converted into perfluoropolyether base oils through photo-oxidation or anionic polymerization. The thickener uses high-purity polytetrafluoroethylene (PTFE) micropowder (typically
