Fluorine-free release agents are functional substances that separate molds from molded products to prevent the products from sticking to the mold surface, and they do not contain fluorine elements. Their primary role is to prevent the products from adhering to the mold surface during the molding process, thereby ensuring that the products can be successfully ejected from the mold. Additionally, release agents help maintain the smoothness and integrity of the product surface, improving molding efficiency and product quality. Compared to fluorine-containing release agents, fluorine-free release agents offer excellent performance while also providing fluorine-free emissions, being harmless to humans, being suitable for a variety of materials, and requiring less usage per application. Therefore, they boast higher safety, better applicability, lower environmental pressure, and lower economic costs.
